I have the following code, and I am wondering what would happen if I used the wrong subclass of exception (in my situation, I know it will be used, but just want to make sure). I know I will get an exception, but how severe are the effects? Are there any class cast exceptions?

```
public class Test{ public static void main(String[] args) throws Exception{ Test t = new Test(); t.proceed(); } public void proceed(){ int a = 100; try{ System.out.println(a + "a"); } catch (Exception e) { System.out.println("Testing"); } } }
```

A: You'll get a ClassCastException.

```
public void proceed(){ int a = 100; try{ System.out.println(a + "a"); } catch (MyCustomException
