Notice an increase in the variance in income of the first quantile in the top panel (B). Why? First, the sample size is smaller and the effect of removing from the sample people who are making high incomes is greater. This same effect would not have a large impact on the bottom panel (C) because the sample size in the bottom panel (C) is greater. Imagine what would happen to the bottom panel (C) if we had removed the highest income quantile from the sample. Solution, most de's have inī-∞nitelyÂ . Solution, most de's have inī-∞nitelyÂ .
