can be used to integrate external programs into AutoCAD functionality. Some AutoCAD commands can also be accessed directly through the GUI.

Examples of these are the DB2 database and other IBM software packages that can be integrated with AutoCAD. Other examples are the Database Gateway with the RISK or RDBMS (Retail Database Management System) with the DBase development environment. Interoperability features are the common techniques to work with other programs, file formats, or

systems that are compatible with the AutoCAD file format. Using these techniques enables AutoCAD users to directly import and export files, images, graphics, and models between different software products.

Examples of these features are:  
Copy and Paste functions (as in other graphics software)

Connection Manager (used to import and export information from different CAD file types)

Dbase (automatically searches for compatible Dbase files) DB2 (database management tool)

DXF (export native CAD files)
