Sivan.Q: How to dynamically
build a SQL statement from
an array I've got an SQL
query that looks like this
SELECT column FROM table
WHERE column ='some
value' OR column ='some
other value' OR column =
'yet another value' Now I'm
building a SQL statement
from a list of column names

(output from an API call) that I want to lookup. I have no idea how to approach this. The only approach I can come up with is doing this:

```
$columnArray = array(1, 2, 3); $whereClause = array('column' => '*', 'column' => '*', 'column' => '*'); $result = 'SELECT * FROM table ';
```

```
foreach($columnArray as $column) { $whereClause[$column] = $someValue; $result.=
```
